Job Description

Design Engineer, £35,000, Blandford

COVID-19

Whilst we are still working on this vacancy for our client there are likely to be disruptions during the selection process because of the government's lockdown related to the Coronavirus. Whilst my colleagues and I at Rubicon are all working from home, the situation remains quite fluid and we are receiving daily notifications from clients regarding their own working statuses, as you can imagine. Therefore, please bear with us throughout the recruiting process - from our response to your interest in this advertised vacancy, through to the interviewing stages right up to the offer and potential start. Here's more about this particular role...

Purpose

As a **Design Engineer** for this **vital** manufacturer, you'll **develop new products** and **refine** existing designs to support **surging demand** to **frontline health services**. Joining a large team of

experienced Design Engineers, you'll analyse specifications and produce **quality** designs.

Responsibilities

As **Design Engineer** you'll:

- Design entire development projects from concept to delivery
- Ensure designs are **compliant** with industry standards, policies and procedures
- Continually **refine** established ranges
- **Investigate** design factors including function, materials and performance
- Prepare material, cost & timing **estimates** and reports

Background

The successful **Design Engineer** will:

- Have previous experience of a similar development role within **manufacture**
- Have knowledge of **CAD** software
- Be highly **analytical** and determined
- Enjoy working as part of a **team**
- Desirably have a relevant engineering qualification

Employer

Rubicon Recruitment's client is an established **manufacturer** of quality and **bespoke products** specifically engineered to meet the varied demands of an ever-growing health sector. Using **innovative** and **award-winning** technologies they've developed customer specific **solutions** for national government, public and private services for 70 years.

Package

Continued **profitable growth** has led to this **Design Engineer** vacancy which will see the successful candidate directly supporting critical healthcare services. As demand increases - particularly with the current economic crisis - you'll assist in providing key solutions to people in need.

You'll start with 25 days holiday (+BHs) and enjoy good overall benefits including life insurance, career progression, a modern working environment, free parking and more...
